

A Better Product

Founded in 1984, Polyvel Inc. has provided innovative technical solutions to the plastics industry through the development of close working relationships with our customers. Over the years, we have built Polyvel Inc. into a technology-based, market-driven manufacturer of inventive plastic additive concentrates for the film, fiber, molding and compounding industries.

The privately owned corporation currently occupies a 45,000 square ft facility in Hammonton, New Jersey with five twin-screw extrusion lines for production and one twin-screw extruder in the laboratory. Present capacity is over 3 million pounds a year with room to double that amount in the current facility.

Polyvel, Inc. is represented by nine

A Better Way

sales/distributors throughout the world; consequently our current international trade level of 30% is expected to rise to near 50% within two years.

With a primary focus on liquid, low melting point, highly volatile, and heat sensitive polymer additives, our additive concentrate product lines (among others) include: Anti-fog Agents, Anti-static Agents, Fragrances, Slip Additives, Wetting Agents, Processing Aids, Mold Release Agents, Lubricant Additives, Peroxides and Specialty Additives.

Innovation is the future of Polyvel, as we continually develop new products to augment our additive concentrate lines.

Optimism is the keynote of our economic plan. Through the development of new products, key partnerships including a joint venture with Goulston Technologies, and

an aggressive expansion of our international sales and distribution network, we anticipate doubling the size of our business within three years.

We continue to invest in state-of-the-art equipment and technology, and in the training and development of a world-class workforce that will enable us to achieve our short and long-term goals.
